Subject: Supporting operation of paired frequency bands

To whom it may concern

Pursuant to sections 2.1033 of CFR 47, I hereby confirm that whilst the 305-0007 product does not transmit over the air in the uplink, it supports operation in all paired frequency bands applicable to its bands of operation.

I also specifically confirm that the product supports uplink operation in the 1710-1780 MHz for devices receiving a downlink in the Part 27 2110-2180 MHz band.

Furthermore, I confirm that the product passes through unchanged all signal received from a connected transmitter and thus supports operation as detailed in §90.548 when connected to any suitably certified transmitter from any vendor

Yours Sincerely

Charlie Blackham
Director
